

Website Development - Course Curriculum

BASIC LEVEL

Planning, HTML and CSS fundamentals from zero.

Module 1: Website Planning (4 hours)

Deciding what to build before writing code.

- Site goals and structure
- Wireframing
- Content inventory
- Design references

Practical task: Wireframe a five-page website.

Module 2: HTML Fundamentals (7 hours)

The structural language of every web page.

- Document structure
- Text, links and media
- Semantic elements
- Forms and inputs

Practical task: Code a semantic multi-section page.

Module 3: CSS Fundamentals (8 hours)

Styling, spacing and visual hierarchy.

- Selectors and the cascade
- Box model and spacing
- Typography and colour
- Flexbox basics

Practical task: Assignment: style your page to match a design.

INTERMEDIATE LEVEL

Responsive layouts, JavaScript and WordPress.

Module 1: Responsive Layouts (7 hours)

One codebase that works on every device.

- Grid and flex layouts
- Breakpoints and media queries
- Fluid typography
- Mobile-first workflow

Practical task: Make a desktop layout fully responsive.

Module 2: JavaScript Basics (8 hours)

Adding behaviour and interactivity.

- Variables and functions
- DOM selection and events
- Conditionals and loops
- Simple UI components

Practical task: Build an accordion and a mobile menu.

Module 3: WordPress Setup, Themes & Page Builders (9 hours)

Delivering real client sites efficiently.

- Hosting and installation
- Themes and child themes
- Essential plugins
- Page builder workflow

Practical task: Case study: rebuild a page in WordPress.

ADVANCED LEVEL

Forms, speed, security, testing and live delivery.

Module 1: Website Forms & Integrations (5 hours)

Capturing leads reliably.

- Form plugins and validation
- Spam protection
- Email delivery
- Basic integrations

Practical task: Build a working enquiry form with validation.

Module 2: Speed Optimisation & Security Basics (6 hours)

Making sites fast and hard to break.

- Image and asset optimisation
- Caching
- Core security hardening
- Backups

Practical task: Improve a slow page's load performance.

Module 3: Testing & Live Website Project (12 hours)

Shipping a real site with confidence.

- Cross-browser testing
- Accessibility checks
- Pre-launch checklist
- Deployment and handover

Practical task: Final project: launch a complete live website.

Have questions about our Training Programs or need more details before getting started?
